

LINKED LIST DELETION

Create a linked list using C++ program and insert the elements in linked list and delete the element in list. Also display the elements of linked list.

Instruction: -

- Create a structure named Node
- Create a class named LinkedList
 - Create constructor of class
 - Create a insert and display member function
- Insert the element at beginning of list and end of list.
- Delete the element at beginning of list and by searching the element in list.

C++ Code

```
1. #include<iostream>
2. using namespace std;
3.
4. struct Node{
5.     int data;
6.     Node *Next;
7. };
