

# INTERNAL CSS IN HTML

## Instructions:

- Create an HTML file.
- Add an internal CSS block within the <style> tag in the <head> section.
- Move the inline styles from the [Previous HTML Activity-9](#) into the internal stylesheet.
- The internal CSS should style the following elements:
  - A heading (<h1>) with **red** text and **center alignment**.
  - A paragraph (<p>) with **blue** text and a **font size of 18px**.
  - A button (<button>) with a **yellow background**, **black text**, and **padding of 10px**.
  - A link (<a>) with a **green color**, **underline removed**, and **bold font**.
  - A division (<div>) with a **light gray background color** and a **width of 50%**.
  - A table with **borders**, **zebra striping** (alternating row colors), and a **header row** with bold text.
